- H. P.: 35
Here are some of the Carver features for '57. These features are not for appearance sake alone, for Carvers are engineered by men who know and use boats. All are designed to provide a stronger and much better performing boat.

**Transom**
Carver's offset transom is constructed to eliminate the need for transom strakes and to provide a stronger hull. It carries the motor rushes forward to overcome the amount of aft suspension on the newer motors (15 ft. models only).

**Innerstress Bottom**
Carver's exclusive innerstress bottom (pat. pending) thoroughly proven to be far superior. Due to the unbelievable rigidity. This completely eliminates the need for awkward stringers. Making it unnecessary for any troublesome fastenings through the bottom of the hull. This added strength is molded into the bottom only, making a lighter hull by maintaining the 5 ply sides (patent pending).

**Carver Hull**
All Carver hulls are moulded at the Carver plant and are guaranteed by Carver, not a sub-contractor. You benefit through such development as the Carver exclusive innerstress bottom. Carver hulls are moulded from the highest quality mahogany and resins. All pre-assembling is with bronze staples hulls are moulded under pressure of 65 P.S.I. at temperatures above 300°F.

**Notice**
Manufacturer reserves the right to revise, change or modify construction of Carver Boats without notice.

**Hatch**
The hatch in the aft deck of the Carver 15' boat allows storing the gas tank without trouble. This hatch allows easy access to battery, starting accessories, etc.

**Instrument Panel**
Carver offers large, spacious, instrument panel with lots of room for mounting any amount of instruments, switches, etc. Installed at a 14° angle similar to the finest in boats. Carver's built-in solid mahogany glove compartments in the walk-thru center deck model offers all the comforts and conveniences of extravagant living.
